Q: Convert String to Integer (in C) Is there a way to convert a string to an integer without doing a long series of strcmp and arithmetic? If the string is less than 10 characters or has non-digit characters, I'd like to return 0.

A: C11: 5.2.4.2.1.1/p3: In some contexts, a string literal is implicitly converted to an int or unsigned int at run time: if the string literal represents a value in the range of int, it is converted to an int; if the string literal represents a value in the range of unsigned int, it is converted to an unsigned int. If the value of the string literal is greater than or equal to the maximum value representable in the context and the precision is not lost, the value is converted to unsigned int; otherwise, the behavior is undefined.

from: ISO/IEC 9899:2011 6.3.4.2.1.1/p3: -- quote from C11, footnote #1 this is is the part you probably were looking for: A string literal that compares equal to the string literal "0" represents a non-negative integer
